

Forklift Fork Positioners

Forklift Fork Positioners - A fork positioner is an apparatus made out of top quality materials meant to endure the most difficult procedures and work environments. This particular piece of equipment could enable the person driving to work the blades hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more exact lifting and placement in a faster and more effective method.

The unique blade pocket design could enable operators to safely swing the unit's blades without any worry of destroying the positioning cylinders. This could allow the operator the choice to either perform simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into blade positioners on available units.
